

("Brazil Dry Spell May Have Damaged Coffee Crop -- Market Talk," at 1038 GMT, misstated the name of the research firm mentioned. The company is called Procafe, not Volcafe. The correct version follows:)

1038 GMT "It is becoming increasingly clear that the dry spell in January had a more damaging impact on the coffee plants than previously assumed," Commerzbank says. On Tuesday, Brazilian research firm Procafe told Reuters that the current Brazilian crop could be as much as a third smaller than was expected in March. Procafe's president also warned the harvest, which is currently two-thirds complete, was producing smaller beans than expected. The world's largest coffee producer suffered a severe drought in January, causing worries over damage to young coffee crops. Robusta coffee futures for September delivery are up 0.61% today at \$1,649/ton. (katherine.dunn@wsj.com)
